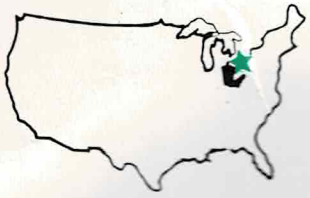
All products tailored to your end use!

bpf

Brentwood Plastic Films, suburban to St. Louis, MO was founded in 1962. Began with emphasis on narrow width poly tubing for the converting industry. Now, this plant has 6 extrusion lines producing film from 1" to 38" layflat tubing, sheeting, and folded widths. BPF has 14,000 square feet production and warehouse space. Brentwood provides its customers with a choice of 15 different plastic polymers.

cpf



Founded in 1965, CPF is suburban to Cleveland, Ohio. This 40,000 square foot plant located in Elyria, Ohio, has 7 extrusion lines with 2" to 58" layflat width extrusion capabilities. Limited converting capabilities (bags) are also located here. Again, a wide range of polymers available for your requirements.

dpf

Dallas Plastic Films located near Dallas, Texas in Mesquite, Texas, was founded in 1970. Width capabilities range from 3" to 61" layflat. Narrow width sheeting as well as wide sheeting is available from this modern facility. This plant has 24,000 square feet production in warehouse facilities as well as storage capacity for over 1 million pounds of material.

jpbf

Established in 1970, this subsidiary plant of Brentwood has 6 extrusion lines. One line is a co-extrusion line specializing in custom two-ply films for a variety of end uses. Jackson has over 40,000 square feet of warehouse and production space. Bag making capability and printing facilities are of latest state of the art. Film widths up to 40" are available from Jackson.

Our sales and production management teams have, over the years, made it a policy to search and find the best possible resin to extrude into the best possible film to satisfy the most demanding end uses.

We look forward to serving your needs.

Joseph G. Longstreth
President
